TrafficView

The TrafficView presents flarm and ADS-B traffic in a more readable format and includes a new head-on warning display. The redesign of the visual interface provides a great improvement over the original flarm display units. Audible warnings are also provided from an internal buzzer.

The TrafficView is available in a 57 mm or 80mm size and includes waypoint and task modes with airspace display and also has a nearest mode to allow for quick selection of the closest waypoint or airport.

A micro SD card reader is used to transfer files, including flight logs that have been transferred

from the Flarm unit to the TrafficView.
