The SxHAWK Vario

The SxHAWK vario is the most cost effective method to add a new HAWK enabled vario to your panel. Based on the S10/S100 chassis, the SxHAWK is a simplified vario, removing the Task and Airspace pages, while maintaining both the TEK and HAWK vario displays and real-time wind calculation using the extended Kalman filter.

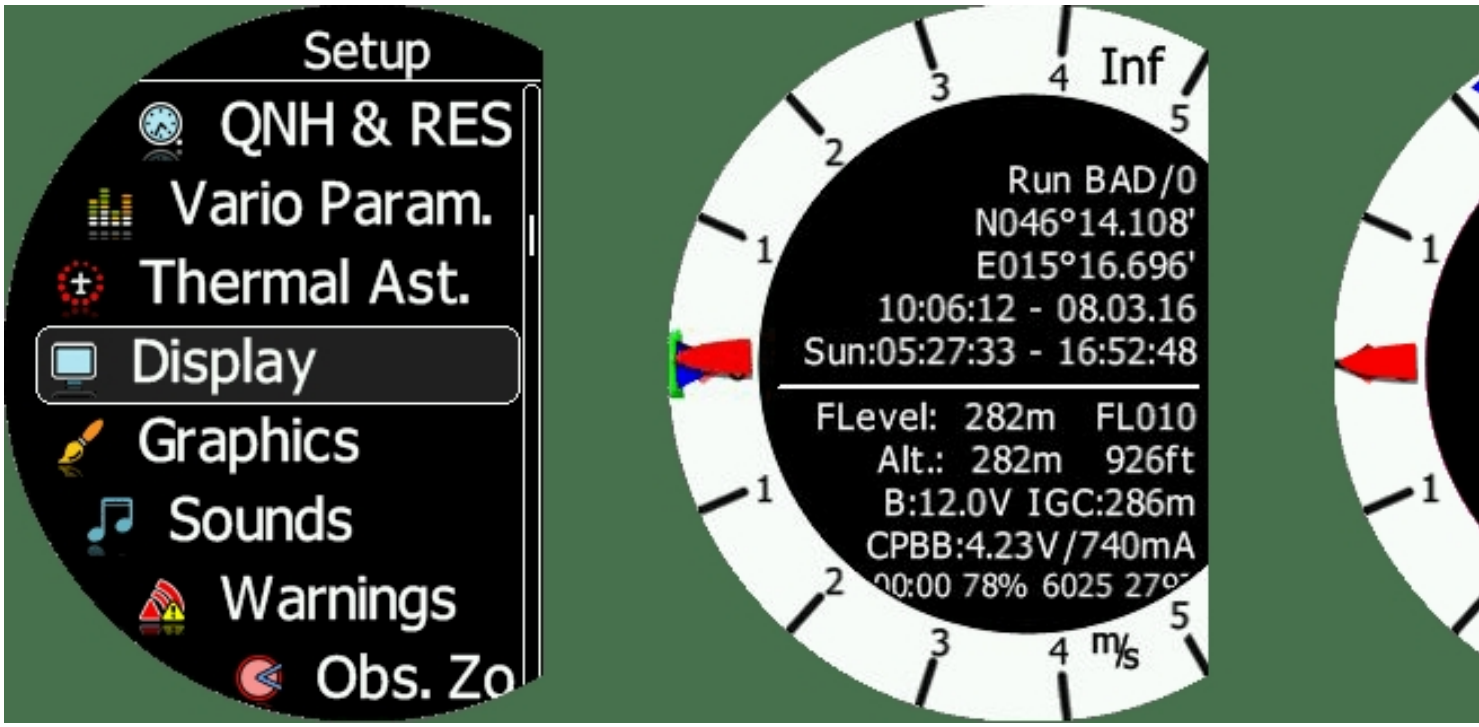

For two-seat applications, it can be paired with and S10D or S100D
